Case 1. CSVP 2026-3302 (NTU2024-1918, NTU GIMCP, C.Y. Tsai, W.H. Huang, Y.C. Chang, and H.W. Chang)

Feline, Munchkin, 6-year-old, male castrated. The patient was diagnosed with OD uveitis and FIP in April 2019. OD secondary cataract was noted in July 2019 and progressed to phthisis bulbi by October 2022. An OD iris mass was identified in September 2024; the lesion was unresponsive to steroids and continued to progress. Enucleation was performed in October 2024.

貓之眼內骨外骨肉瘤

Intraocular extraskeletal osteosarcoma in a cat

國立臺灣大學獸醫專業學院分子暨比較病理生物學研究所

摘要 1 隻 6 歲雄性已絕育之曼赤肯貓，其右眼於 5 年內先後診斷葡萄膜炎、繼發性白內障、眼球癆、與虹膜團塊，團塊經類固醇治療下無有效反應，最終進行右眼球摘除。肉眼下，眼球內原水晶體與右側虹膜處被一團塊佔據並抹除原有結構。組織病理學下，團塊由梭狀腫瘤細胞、軟骨、硬骨組織、與類骨質沉積組成，最終診斷為貓之眼內骨外骨肉瘤。

關鍵字：眼內骨肉瘤、骨外骨肉瘤、貓眼創傷後肉瘤
